JUNE BUDGET DEFICIT

The June Federal budget results were released on Monday to little fanfare, surprising as it is three-quarters of the first full Trump 2.0 FY2026 year. The Federal budget deficit is running \$1.804 trillion on a 12-month trailing sum basis in June 2026 which is 5.7% of nominal GDP, a level that is sustainable for now in that the amount of Treasury auctions to fund the red ink is being bought up without higher yields by investors global and domestic. If economists (subject matter specialists according to Fed Chairman Warsh) believe 3% is sustainable over the long haul, the deficit would need to be about \$950 billion. Doing the subtraction ourselves, as the Monthly Treasury Statement omits a deficit figure, the FY2026 budget deficit is still \$2.064 trillion. The White House OMB FY2027 Mid-Session Review is due any day now for an update. There a few sources, but the greatest income tax refunds in history this year, due mostly to many taxpayers not adjusting their withholding, were less than expected perhaps or at least the June Monthly Treasury Statement year-to-date refunds totaled \$321.5 billion versus \$295.9 billion for the comparable period a year ago. How much is it? Keep in mind retail sales released this week just for the one month of June was \$768.5 billion.

The June 2026 social security deficit was \$23.2 billion, and no, the money to cover it does not come from the trust fund. Social security is already relying on general tax revenues including Treasury debt sales to fund the shortfall between social security tax collections and benefit payments to retirees. Customs duties are reversing due to the refunds, flat in May and now a \$25.6 billion deficit in June. Adjusted interest subtracts the government accounts and totals \$1.048 trillion the last year. Manageable. Food stamps are holding for now at \$7.7 billion in June.

Social Security In/Out

**"Social Security" is a net figure: Payroll taxes minus Benefits paid, normally a deficit funded by other taxes, Treasury borrowing from market etc.													

*"Social security" is a net figure: Payroll taxes minus Benefits paid, normally a deficit funded by other taxes, Treasury borrowing from market etc.

If you voted in 2024 to rein in too much government spending (77.3 million vote Trump, 75.0 million Harris, 2.9 million for "Others," 90 million or 35% of those eligible did not vote), total budget outlays in the first three quarters of FY2026 were \$5.517 trillion, 3.2% higher than a year ago. If it helps, CPI inflation before a Warsh task force deep-sixes it, rose 3.1% over the same period, so real spending is flat. As usual the three largest departments, HHS, Treasury, Social Security, are 73% of the \$5.5 trillion total. The biggest cuts were at the EPA, Commerce, State Department, International Assistance. Homeland security is down; ICE increased from \$7.5 billion to \$17.3 billion including new luxury jets, but the storm count is down with Disaster relief expenditures falling from \$40.3 billion to \$20.1 billion. The Small Business Administration saw increased spending in its Disaster Loans Program however.

On the revenues side, corporations got some tax breaks last year that are driving FY2026 tax collections to \$350 billion we estimate. This helps the \$2.1 trillion budget deficit forecast, but that forecast has a very high outlays projection that is unlikely. Final table is on the debt time bomb... not as bad as you think. 88% of GDP.

INTEREST RATES

Stocks moved briefly above last week's high near 7,600 but failed. AI fears are never far away, and IBM collapsed 25.2% Tuesday after "preliminary" earnings where the company said increased AI tech spending is coming at the expense of IBM product and software sales. The Iran war is back on, and higher crude oil Monday lifted 10-yr yields. Tuesday's surprise unchanged core CPI report brought yields back down. Fed officials are still warning inflation is too high for some reason; half the FOMC minus Warsh wants higher yields. Crude oil made a new high at \$81.78 for the new September front contract Friday, but 10-year yields closed the week at 4.55%, down from Tuesday's 4.64% high yield for the week for some reason. Before Tuesday morning CPI, Fed futures for September meet said 4.015%; 3.875% after. Light news calendar next week. Warsh task force needs to find new indicators.

JPMorgan Chase (JPM) up 5.1% YTD

Earnings released Tuesday before the bell, and the stock rallied 2.5% to a new high, in a wide-ranging day. It closed \$334.53 on Monday. Peace talk and lower oil prices helped the stock rally in June. News of half the FOMC favoring rate hikes this year at the June 17 meeting did not do much. After the Fed stress tests were announced at 4pm on June 24, the bank raised its dividend from \$1.50 to \$1.65 and also announced buybacks. The annual dividend yield is 1.9% off of Friday's close.

FEDERAL RESERVE POLICY

The Fed meets July 28-29, 2026 to consider its monetary policy. The war is on again; higher energy prices are increasing inflation risks according to some in the markets. On the other hand, CPI and PPI inflation fell for the month of June in this week's reports. The nation's chief economist was questioned for hours on Tuesday and Wednesday during his semiannual Monetary Policy Report testimony. Day 1 on Tuesday before the House was his "mission accomplished" quote. He was not declaring victory after CPI fell 0.4% and core CPI was 0.0% in June released earlier at 830am. Next day PPI fell 0.3%, and Warsh volunteered to Senate Committee Chairman Scott: "We have gotten data on CPI and PPI any central bank would be happy to have the data going in the right direction. My view is these are all imperfect measures of the state of underlying inflation." Senator Kennedy (R-LA) asked whether these CPI/PPI inflation data were temporary or permanent and did not get an answer. Okay. Nobody home. I guess we will all just have to do Fed watching ourselves. We think they hold off on rate hikes with core CPI commodities going nowhere. Fed rate is in neutral.

OTHER ECONOMIC NEWS

No CPI inflation (Tuesday)

Breaking economy news. CPI inflation went into reverse with falling energy prices. Import tariffs not evident to the casual eye with Commodities less food and energy commodities down again, and clothing falling 0.6%. Maybe the customs duties refunds (\$49.2 billion in June) allowed merchants to cut prices for everyday Americans. We hope BLS 2.0 calculations are all in order. The press release write-up included household furnishings and operations, recreation and personal care among the indexes in all items less food and energy they say fell in June, only a table in the report says these prices rose. The CPI report was also interesting as Fed governor Waller said he would be watching it closely as inflation is too high, like he has a rate hike bias. Stay tuned.

No wonder why Warsh has a data task force looking for more secret sauce economic indicators, he does not appear capable of understanding the indicators that are out there. We cannot figure out why he did not have something more/better to say about the stunning 830am CPI report today when he was grilled on the Semiannual Monetary Policy Report before the House. It's not just one data point. Monthly core commodities price percent changes, commodities most directly impacted by import tariffs, have been either flat or down a tenth all year long, except for 0.1s in February/March. Certainly looks like a trend. Warsh has been criticized for his reluctance to say exactly how he is going to get inflation down, but it won't matter if we continue to get numbers like this. Maybe the best course of action for Fed 2.0 is to leave rates alone at 3.75% and don't touch them again this year.

Net, net, hang onto your hats and buy stocks and buy bonds as a big fat deflation report for the consumer has hit the market's expectations right between the eyes. Core inflation was unchanged as shelter prices unexpectedly slowed to a crawl with an increase of just 0.1%. That can't last. The upward import tariff effect on consumer store-bought goods has

vanished with core commodity prices falling 0.1% the last two months. Inflation, what inflation the market is screaming. Gone, poof in the blink of an eye. You can take those Fed rate hikes off the table for now as the current neutral Fed funds rate of 3.75% is perfectly balanced for the upside and downside risks to the economy and inflation. Bet on it. The markets are.

No PPI inflation either (Wednesday)

Breaking economy news. PPI inflation fell 0.3% in June, market was looking for 0.0%, and the May 1.1% increase is now just 0.6%. Fed 2.0 is interested in better economic data, but there is the actual data and the interpretation of the data. Warsh keeps talking about the last inflation crisis during the pandemic that the Fed got wrong. Looking back at the graph of PPI Final demand goods less foods and energy, it is interesting to note that core goods here peaked at a 10.2% rate in April 2022, a month after the Fed first 25 bps rate hike from 0.25 to 0.50 percent. Core PCE inflation that Fed 1.0 used to target was 5.3% year-on-year in April 2022. How bad is PPI inflation? The graph here says 5.1% year-over-year, about half as bad as it was in 2022.

		Final demand goods				Final demand services				
Monthly % SA		Total final demand	**Less foods and energy				Transportation and warehousing			Other
2026			Total	Foods	Energy		Total	Trade		
	Jan	0.6	-0.1	-1.3	-1.7	0.7	0.9	2.0	1.0	0.3
	Feb	0.5	1.0	2.3	2.0	0.4	0.3	-0.3	0.8	0.5
	Mar	0.8	2.0	-0.6	10.5	0.3	0.3	0.5	2.1	0.0
	Apr	1.1	1.9	0.2	7.2	0.7	0.7	1.3	3.7	0.1
	May	0.6	2.3	0.5	8.4	0.7	-0.1	-2.3	2.0	0.7
	Jun	-0.3	-1.4	-0.6	-6.4	0.2	0.2	0.4	-0.1	0.1
		**Final demand goods, less foods and energy is old-fashioned PPI								

**Final demand goods, less foods and energy is old-fashioned PPI

Net, net, the improvement in the inflation outlook is better than markets thought as Producer price inflation is also in retreat in June, along with a sharp downward revision to May, which means producers will not need to pass on their higher costs to consumers in the near term. Energy prices reversed sharply falling 6.4% in June after May's 8.4% jump and there is renewed concern about the war in the Middle East, but other producer prices have fallen outside of energy with transportation and warehousing down 0.1%, the first drop since June 2025, and old-fashioned PPI which goes by the long name of Final demand goods less foods and energy slowed to a manageable 0.2% rise in June. Stay tuned. The Fed's war with inflation isn't over by any means, as Fed Chair Warsh made plain in yesterday's testimony, but there is good news from the front and the odds of Fed rate hikes should continue to recede as inflation at the factory level is trending lower, and producers will not be passing on their higher costs to the consumer level as much as we previously thought.

Retail sales solid (Thursday)

Breaking economy news. Retail sales rose 0.2% in June, dragged lower by the falling price of gasoline impacting gas station sales. Retail sales were very strong at 12.1% for the second quarter, but ex-gas retail sales were quite a bit less so will keep real consumption expenditures at 2.5% in the Q2 2026 real GDP report due to be released Thursday, July 30 at 830am ET. The only services in the retail sales report are for eating and drinking places and these slowed to 0.1% in June from a 1.2% jump in May. Services are 69% of nominal consumer spending so the retail sales report is incomplete always.

Retail spending, actual dollars, each month

	\$million	% to	Percent Changes %		
	Jun	Total	Jun	May	Year/year
Total Retail Sales	768,553	100.0	0.2	1.0	6.7
Motor vehicles/parts	143,529	18.7	1.9	1.1	5.7
Furniture/furnishings	11,323	1.5	0.0	1.6	0.0
Electronics/appliances	8,249	1.1	0.8	-0.2	5.6
Building materials/garden	41,785	5.4	0.1	-0.3	3.5
Food & beverage	85,449	11.1	-0.2	0.2	1.0
Health/personal care	39,917	5.2	-0.8	0.4	0.2
Gasoline stations	60,587	7.9	-5.3	2.6	19.8
Clothing/accessories	27,864	3.6	-0.3	0.9	4.8
Sporting goods, books	9,071	1.2	1.3	0.8	15.2
General merchandise	79,478	10.3	0.1	0.4	3.5
Department stores	3,325	0.4	0.1	1.0	3.7
Miscellaneous retailers	16,139	2.1	-0.3	3.3	6.0
Nonstore retailers (internet)	142,665	18.6	1.9	1.4	14.2
Eating & drinking places	102,497	13.3	0.1	1.2	3.8
[Total ex-autos/gas]	564,437	73.4	0.4	0.8	5.7

Net, net, consumers continue to shop at malls and stores at a solid pace for a second month as the headline increase in retail sales is brought down only because of the decline in gasoline prices in June. Fed officials do not have to worry about demand overheating the economy and are likely to hold off on an interest rate hike when they meet at the end of July. Only half of the Committee wanted higher rates this year when they met in June anyway. Retail sales rose 0.2% in June, but were up 0.7% taking out gasoline station sales. For May the results were an increase of 1.0% and 0.9% ex-gas. For the services side of spending, food services and drinking places rose just 0.1% in June after a stronger 1.2% in May, so summer is getting off to a slow start. Stay tuned. The economy shows no sign of slowing down to the stall speed if consumers have anything to say about it. We estimate real consumption expenditures rose 2.5% for the second quarter even as the Iran war starting February 28 continues to flash worrying headlines almost every other day.

Industrial production flat (Friday)

Breaking economy news. Factory production has stalled for a second month so the Administration's dream of making it all here in America has not become a reality yet. There has been volatility recently in the production data, but the gains being made are mostly from information processing, defense and space equipment, equipment parts, as well as the in the transit category under business equipment that includes vehicle output and aircraft. Industrial production is also considered as output generally and if so it is just 1.3% higher than a year ago as opposed to year-over-year nominal GDP growth of 6.1% in Q1 2026. Industrial production is increasing, but just modestly following a jump in April. Stay tuned. Factories are not being built yet, and what construction there is is mostly for data centers.

Percent changes			Industrial Production	
Apr	May	Jun	Jun 2026	
0.8	0.1	0.1	YOY	Weight
0.7	0.1	0.0	1.1 Total Index	100.0
1.3	1.1	0.4	1.1 Manufacturing	75.9
0.8	-0.7	0.4	2.2 Mining	11.7
			0.3 Utilities	12.4
			Manufacturing payroll jobs	
			12.6 million -38K YOY	
			9.3% of Private Payroll Jobs
